

## Judging Criteria Explanations

- Scientific Method:
  - Was there a procedural plan for obtaining a solution?
  - If controls were necessary, did the student recognize their need and were they correctly used?
  - Are there adequate data to support the conclusions?
- Non-inquiry:
  - Does the project have a clear objective?
  - Is the solution workable, acceptable to the potential user, and economically feasible?
  - Has the solution been tested for performance under the conditions of use?
